

# PEPITE PROTECT

Protective varnish

For the protection of:  
Pepite Coatings  
Resin paving

## THE HIGHLIGHTS

### Product performance

PEPITE PROTECT is a protective varnish for PEPITE, MICRO PEPITE or PEPITE PAVES based on translucent methacrylate resins:

- Reinforces the resistance to soiling
- Reinforces the structure of the PEPITE coating and reduces the rejection of aggregates
- Gives a wet look
- Does not yellow under UV light

The PEPITE PROTECT varnish is an ultra-resistant varnish specially formulated for total compatibility with the PEPITE resin. It provides increased resistance to the coating while serving as a protection against soiling. It facilitates the maintenance of coatings.

Its wet look enhances the natural colours of the aggregates.

PÉPITE PROTECT is not a marking product. It is not certified NF Road Equipment.

### A high-performance product for sustainable development

- Two-component protective varnish
- Product Life Cycle Assessment report completed and available
- Exceptional product durability.
- Catalytic drying without solvent emission.

## PROCESSING INSTRUCTIONS

### Application and precautions for use

- Mix the hardener (2 doses of 100g - 34%) with the resin
- Manual application with a roller on dry, clean and adherent surfaces.
- Maximum humidity: 80%. Substrate temperature  $5^{\circ}\text{C} < T < 35^{\circ}\text{C}$
- Cleaning and rinsing: Solvécol or Solvéo

### Physical characteristics

- Density: 1.00 kg/l
- Dosage: between 0.2 and 0.3 kg/m<sup>2</sup>

### Packaging and storage

- 10 kg
- Store and transport in a dry, frost-free place, away from direct sunlight.
